Experience

Software Engineer Intern Jun 2026 – Present
OPENLANE — LaneLink Team *Full-time*

- Built an auction transfer workflow spanning **React/TypeScript** interfaces, **Node.js** services, and an external auction integration; updated active vehicle state while preserving prior auction history and audit notes.
- Built an authenticated **Next.js** dashboard and extended an internal integration-test platform with vehicle lifecycle simulation, validated state transitions, transactional **Firestore** updates, and events consumed by downstream services.
- Implemented a client inventory dashboard with **nine lifecycle KPIs** and vehicle-level drilldowns, aligning reporting queries, authorization, and filters so summary counts matched underlying records.
- Automated recurring document-status reminders through scheduled Node.js jobs, recipient grouping, and deployment configuration with safeguards against overlapping runs and duplicate sends after partial failures.

Web Developer May 2025 – Aug 2026
N-2 Water *Remote*

- Developed a headless commerce website using **Next.js, React, and TypeScript**, supporting marketing content and a production e-commerce storefront.
- Integrated **Shopify Storefront and Customer Account APIs** for authentication, order history, subscriptions, and cross-domain cart persistence; collaborated with stakeholders to refine customer workflows.

Selected Projects

Viridian Vault — Inventory Valuation Platform TypeScript, Next.js, PostgreSQL

- Built a cache-first inventory and pricing platform with a four-stage resolution pipeline, **TTL-based pricing**, atomic updates, and validated integrations with external APIs.
- Designed **PostgreSQL schemas**, Row-Level Security policies, and versioned migrations; implemented scheduled serverless workflows to refresh pricing data.

Optionalizer — Productivity Platform TypeScript, Next.js, PostgreSQL

- Designed a layered **UI, API, service, and repository architecture** to separate presentation, business logic, and data access across a multi-feature application.
- Built an append-only event model for state tracking and analytics; implemented schema validation and **Vitest** testing workflows to verify behavior and catch regressions.

Education

University of Illinois Chicago Chicago, IL
B.S. in Computer Science Dec 2025

Technical Skills

Languages: TypeScript, JavaScript, SQL, Python, C/C++, HTML/CSS
Frontend: React, Next.js, Tailwind CSS
Backend & Data: Node.js, REST APIs, Firebase, Firestore, PostgreSQL, Supabase, Redis
Testing & Reliability: Vitest, Jest, pytest, integration testing, lifecycle simulation, Zod validation
Tools & Delivery: Git, GitHub Actions, Docker, Linux/Bash, Vercel, scheduled jobs, Agile/Scrum
Integrations: OAuth 2.0, Firebase Authentication, Shopify APIs, OpenAI APIs, Anthropic APIs
